Ampligo®

One-stop stalk borer control!
Fast knockout action and residual control.
Controls all stages in the stalk borer life cycle.

Ampligo® information

- Ampligo® has egg-killing properties, controls larvae and is active against adult moths. Consequently, Ampligo® is active on the entire life cycle of stalk borers.
- Ampligo® is effective against larvae that show possible resistance to organophosphate, parathyroid and insect growth regulators.
- Larvae stop feeding almost immediately after ingestion of the product and subsequently die.
- The two active ingredients in Ampligo® are both naturally occurring and complement each other.
- Chlorantraniliprole, one of the active ingredients in Ampligo® shows translaminar activity and will move from the top to the bottom of the leaf.
- Ampligo® has relatively long residual activity and provides longer-term control than the contact products.
- Ampligo® is not adversely affected by low or high temperatures and shows good rainfastness within an hour of application.
- Ampligo® contains Syngenta's unique ZEON technology. This technology stabilises Ampligo® in the spray tank, provides better coverage and protects the product from degradation by sunlight.

Application

- Applications should preferably be preventative, but no later than when 10% of the plants show shot hole damage. Reapply just before tassel emergence or at second moth flight or when first signs of infestation are observed.
- Ground application: Direct spray directly over the whorl. Apply Ampligo® at 1.08 ml/100 m row or 120 ml/ha in 90 cm rows.
- Aerial application: Apply Ampligo® at 120 ml/ha.

READ THE LABEL FOR FULL DETAILS

Ampligo® contains Chlorantraniliprole 100 g/l and Lambda-cyhalothrin 50 g/l (Reg. No. L8685, Act No. 36 of 1947).
